

AMALYST INVITED TO JOIN EU GRAPHENE FLAGSHIP CONSORTIUM

Amalyst has joined the EU's Graphene Flagship consortium. Amalyst was amongst 66 new partners invited to join the Flagship in 2014 after a competitive application process. Working in collaboration with organisations across Europe, Amalyst will be seeking to develop exploitable innovations in the energy sector.

Amalyst's CEO, David Hodgson commented, "This is a superb programme and one we're delighted to be a part of. In inviting us to join, the Flagship recognised the leadership position Amalyst has taken in developing and commercialising low cost catalysts for hydrogen technologies. Working with partners developing graphene and related materials, we see possibilities for complementary and completely new products."

Notes to Editors

Amalyst is a Birmingham-based company exploiting IP in non-platinum catalysts initially for fuel cells and water electrolyzers. Amalyst's AMCAT catalysts are low cost, drop-in replacements for platinum as fuel cell anodes and water electrolyser cathodes.

The Graphene Flagship is a science-driven, academic-industrial partnership that addresses grand scientific and technological challenges relating to graphene and related materials. Its vision is long term, bringing together scientists and engineers from across various countries and disciplines, all of whom share a unifying goal, and an ambitious plan on how to achieve it. With the €1 billion Graphene Flagship, Europe will be able to turn cutting-edge scientific research into marketable products. This major initiative places Europe in the driving seat for the global race to develop graphene technologies.
